Emergency Medical Personnel

EMS workers have many different roles on IMR teams.

- Emergency care of patients that walk into clinic or from accidents under direction of the Chief Medical Officer
- ICU - primarily monitoring IVs and doing wound care; obtaining IV access if you have a current IV certification
- Triaging patients for sick and well care
- Triaging patients waiting outside for immediate response
- Teaching medical staff members how to take blood pressure and monitoring their work to ensure accuracy
- Vital signs in the triage area and as needed for providers
- Wound care and labs as needed
- Patient transports as required
- Community health education including CPR, choking, and wound care
- PARAMEDICS; well care of patients with the nursing team
